## ACKNOWLEDGE

As we understand that the eProject is a step-by-step learning environment that closely simulates the classroom and Lab based learning environment into actual implementation. It is a projectimplementation at your fingertips!! An electronic, live juncture on the machine that allows you to.

- ✓ Practice step by step i.e., ladder approach.
- ✓ Build a larger more robust application.
- ✓ Usage of certain utilities in applications designed by user.
- ✓ Single program to unified code leading to a complete application.
- ✓ Learn implementation of concepts in a phased manner.
- ✓ Enhance skills and add value.
- ✓ Work on real life projects.
- ✓ Give a real-life scenario and help to create applications more complicated and useful.
- ✓ Mentoring through email support.

We would like to send a great thank to our professor and others student for the adorable supports during the time in project.

Beside several mistakes we had made in the project, we hope to have more opportunities to widen our knowledge in web developing world.

We also thank you so much for your information and the “demo” project from India APTECH to help us get more reality experience in this project. Since we have gained more experience from this project, we will not stop learning any thing as much as we can to be more successful in the future.

Your Sincerely,  
Team Group 03.

## PROBLEM DEFINITION

The CARVAN is largest online car market. It caters to needs of everyone, be it a family, business or individuals. This initiative is aimed towards providing information and details about CAR's to buyers.

The site provides details and specifications of various models offered by the companies. It also provide pictures and images to have a better look.

'CARVAN' is looking to restructure the entire website to provide information and also connect with prospective customers.

The website is to be developed for the Windows Platform using HTML5, JavaScript and Geolocation. The site should work well in all leading browsers including Chrome, IE, Firefox etc.

Here are some problems need to be resolved:

- 1) The products even after being very popular in the market and the sales increasing there are some probable customers who want to view the product, learn about the features and product specifications in terms of storage technique, overall looks etc.
- 2) Some probable customers would also like to compare the various products within the same category. For e.g., there are 2 different types of SUV car, one with 7 seats and 5 seats.
- 3) The product range is not known to quite a few customers they just order on the basis of the feedback or recommendations given by their friends or colleagues and after delivery of the product it does not match either the requirements or expectations leading to wastage of time, resources and delivery costs.
- 4) Existing customers needing some help and support on the product after purchasing would have to call the Customer Service office (difficult with phone lines continuously Busy) who would take their call and send the Service centre people to the place where the product is assembled.
